# УВOD

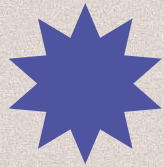

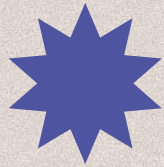

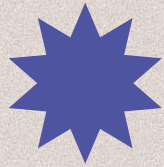

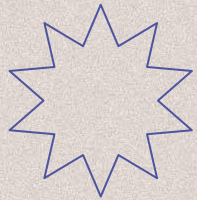

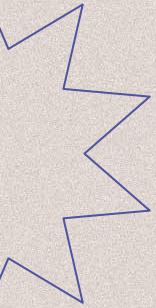

Проекта има за цел да създаде локална библиотека за телевизионни сериали и филми, използвайки Entity Framework за безпроблемна функционалност на базата данни. Той е насочен към хора от всички възрасти, които се интересуват от подобно съдържание, като предоставя удобна и удобна платформа за достъп до информация. Разработката използва съвременни технологии за осигуряване на сигурност на данните и надеждност на системата.

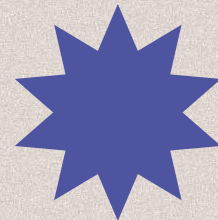

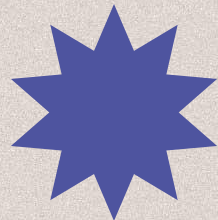

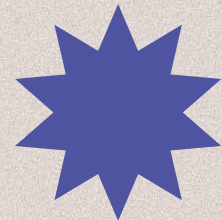

# 02 Проблеми

Какви проблеми има съвременния човек? Аз мога да кажа, че един от глобалните проблемите на съвременния човек е да не може да намери информацията, която търси на момента. В днешно време има толкова много информация, че човек може да се изгуби в търсенето ѝ, да не говорим за невярната информация, препратките докато търсим информация и за възможните вируси в сайтовете за информация.

Направих анкета сред приятели, ученици и семейство за дезинформацията в интернет и какво биха желали да се промени и добави, за да може да се търси информация онлайн лесно, и резултатите бяха очаквани.

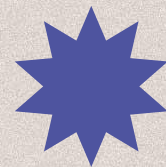

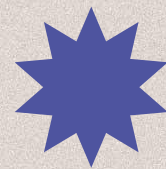

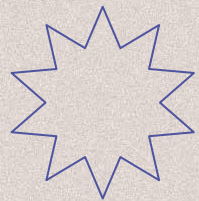

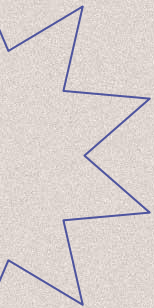

03

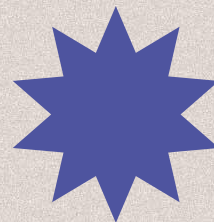

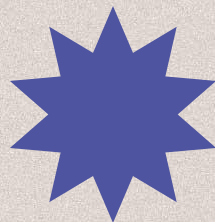

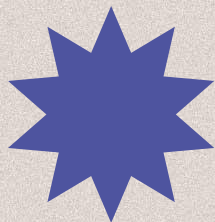

Технологии

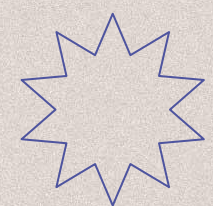

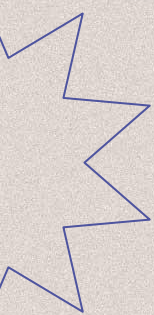

# ИЗПОЛЗВАНИ ТЕХНОЛОГИИ

- .NET Framework v4.8
- Entity Framework
- IMDb Api
- TMDBLib Api
